● AVAILABLE TODAY

CALENDAR

WHO'S WHERE. EVERY DAY.

- **One bar per status.** Leave, TDY and appointments across a month or a quarter, by Group.
- **Drag to add, click to change.** No forms, no reloads.
- **Duty that picks fairly.** Longest since last duty comes first, anyone away is dimmed, and you can filter by rank, role and MOS.
- **Prints like it looks.** The same bars on paper for formation.

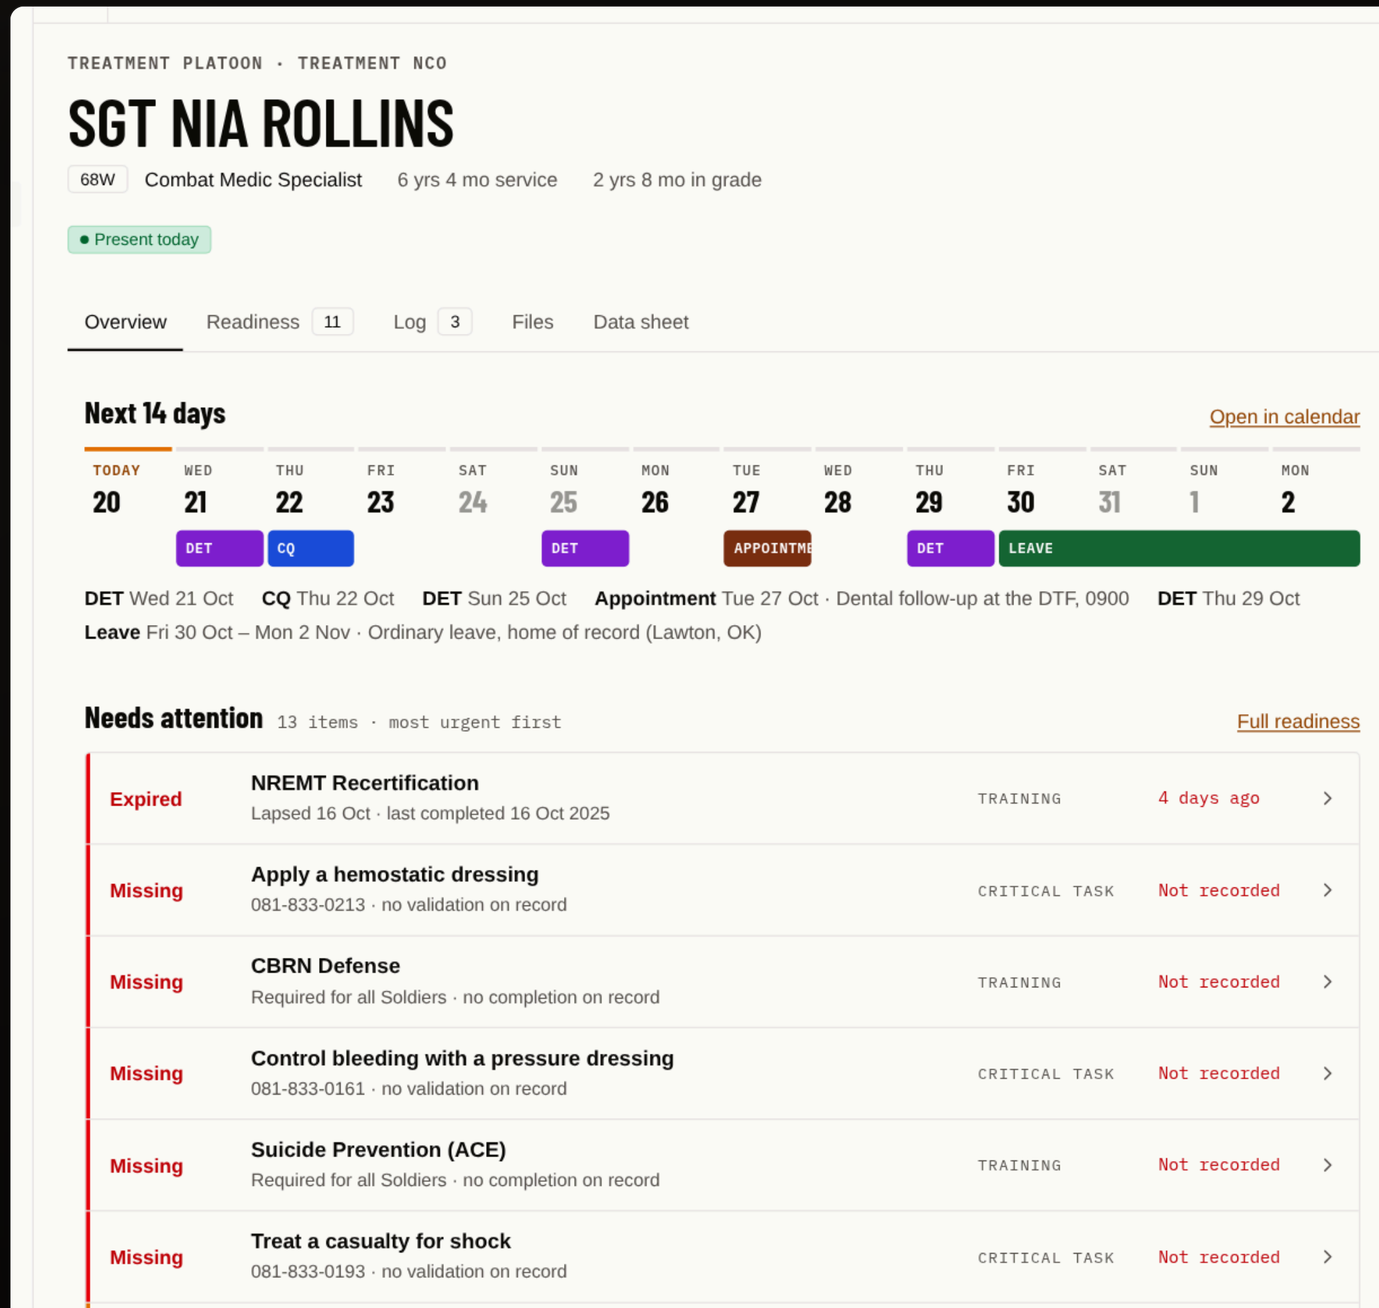

● JUST SHIPPED

PERSONNEL DETAILS

EVERY SOLDIER. ONE PAGE.

- **The next 14 days**, straight from the Calendar.
- **Needs attention, most urgent first.** Training, critical tasks, the NCOER and the ETS window.
- **Log it where you see it.** Snap the certificate and see the new expiration before you save.
- **Follow-ups, notes and counselings** on the same page.

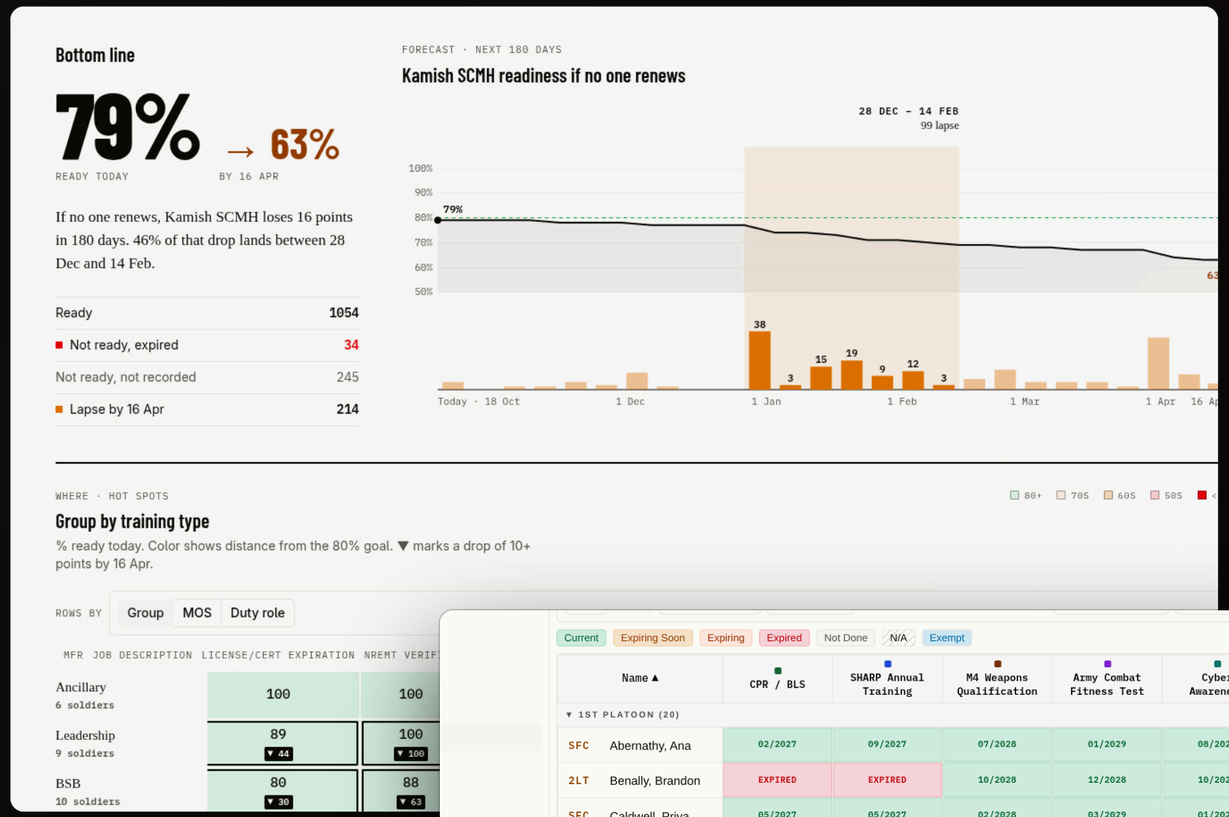

● AVAILABLE TODAY

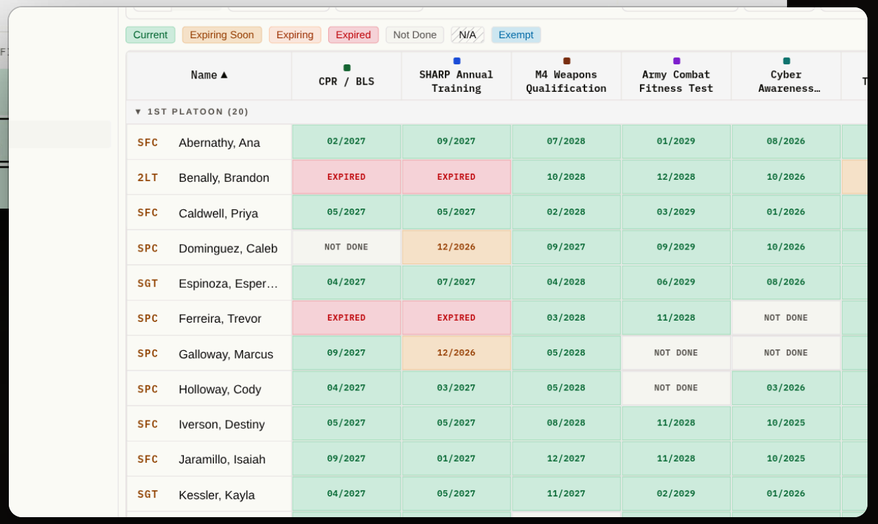

TRAINING · TRAINING REPORTS

SEE THE DROP BEFORE IT LANDS.

- **Every Soldier, every requirement.** One matrix, with critical tasks, onboarding and evals alongside.
- **Forecast up to 180 days.** 79% ready today, 63% if nobody renews.
- **Hot spots and focus areas.** Which sections fall first, and which training buys the most back.
- **Ready to brief.** Print it or export it to Excel.

LIVE DATA · REAL UNIT

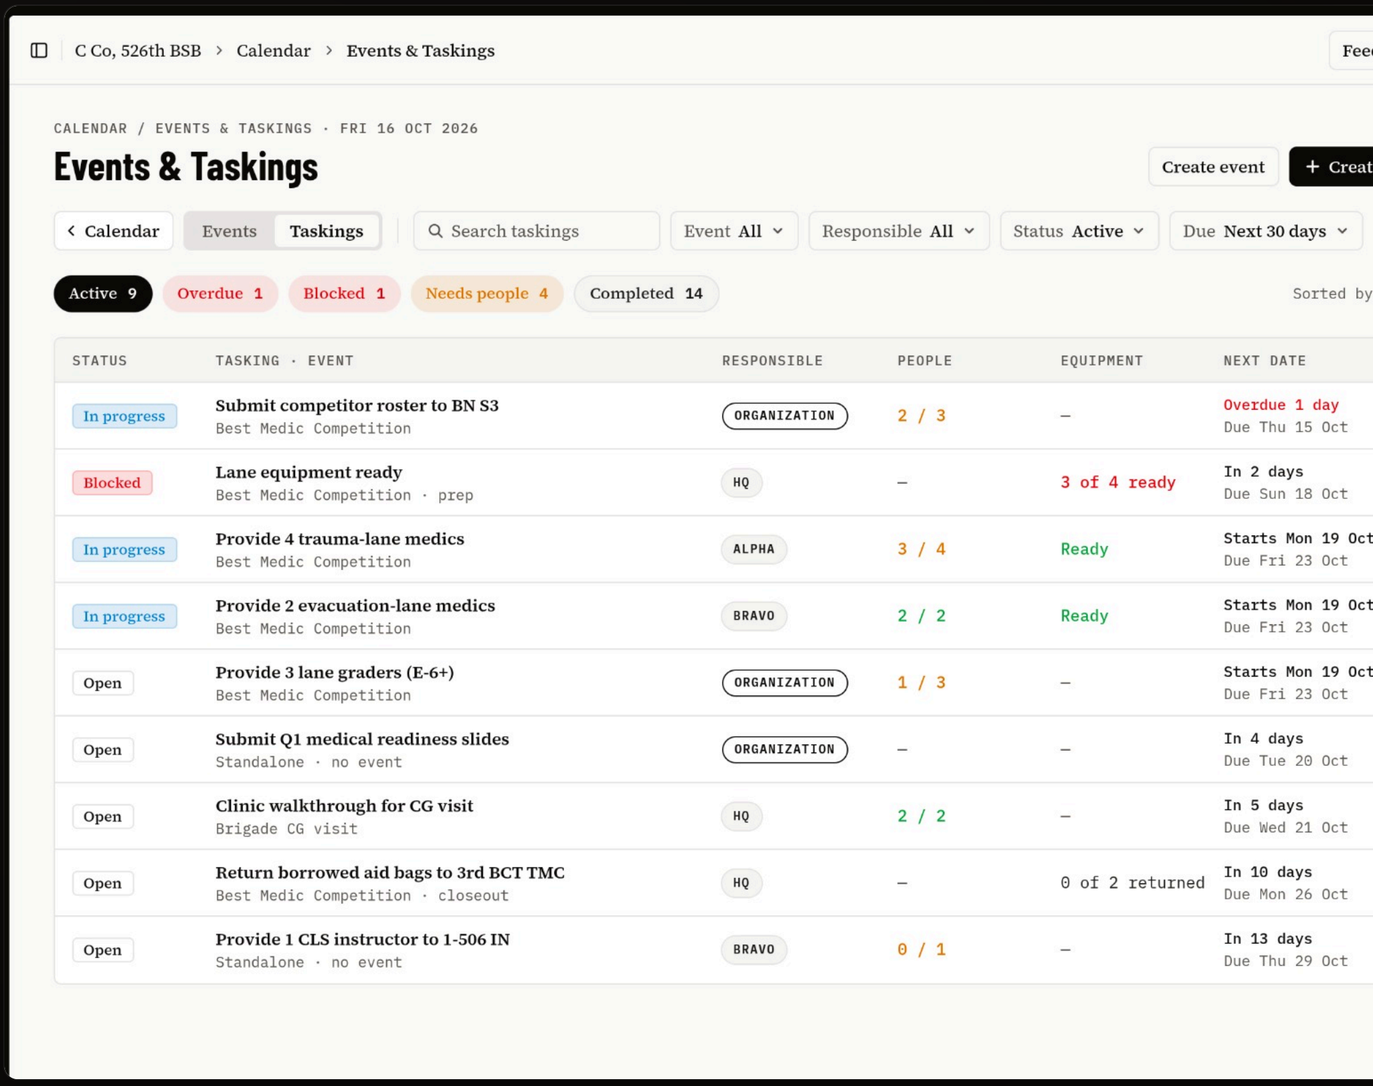

○ IN DESIGN

EVENTS & TASKINGS

EVERY TASKING. TRACKED TO DONE.

- **From the FRAGO to a plan.** An event holds its taskings before, during and after.
- **Routed to the owner.** Each tasking goes to a Group, or stays with the whole unit.
- **Staff it without the phone tree.** Leave, TDY and other taskings show before you commit anyone.
- **Overdue, blocked, short people.** The whole board at a glance.

○ IN DESIGN

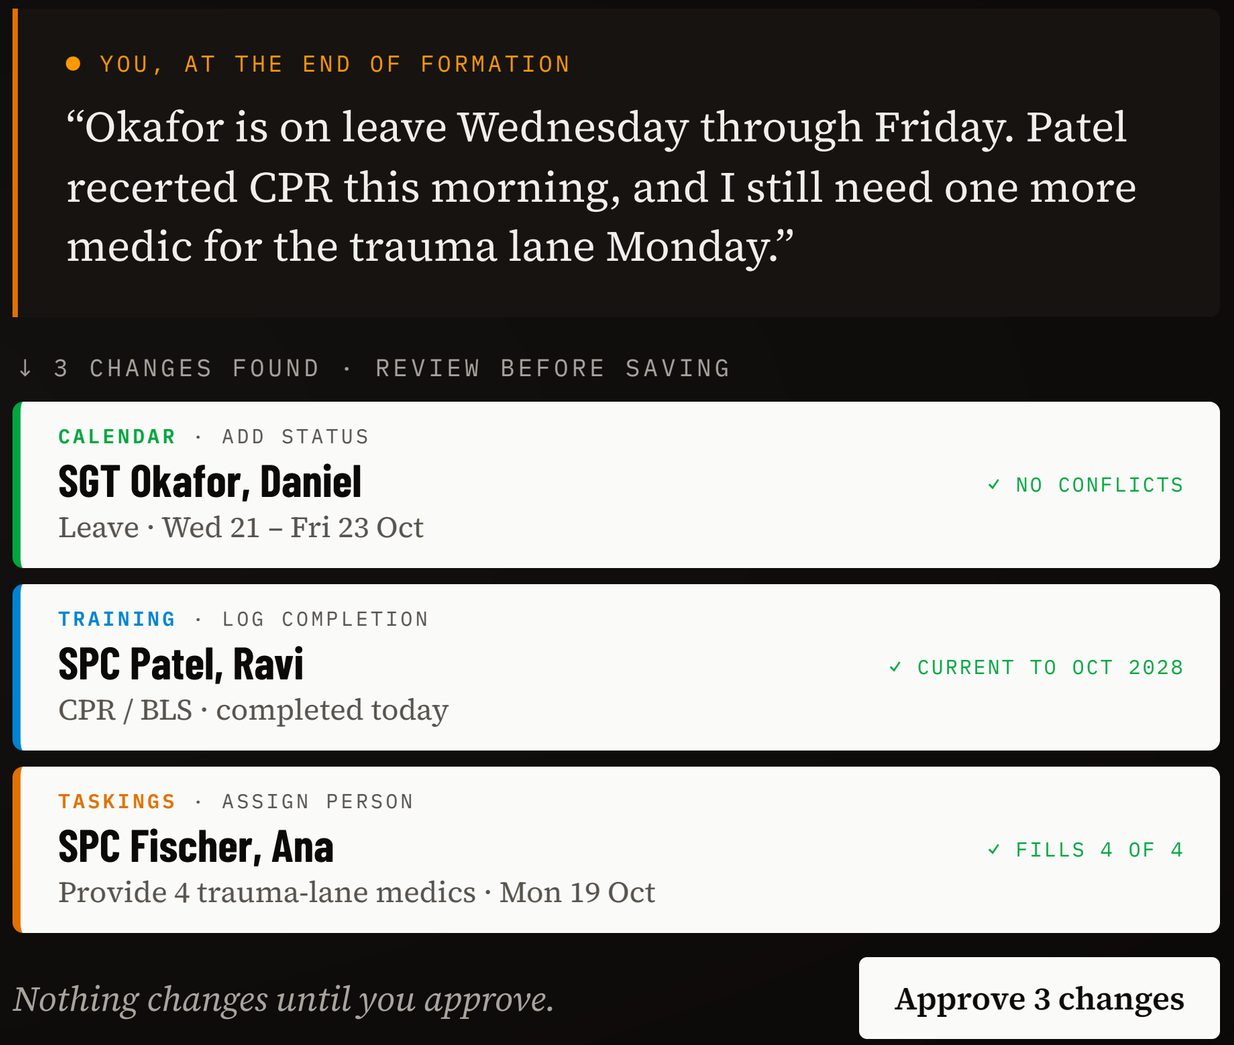

DROP ZONE · AI ACROSS THE PLATFORM

JUST SAY IT.

- **Brain dump in, updates out.** Talk or paste. TroopToTask finds the changes.
- **You stay in command.** Nothing changes until you approve it.
- **Scoped like everything else.** It only sees and changes what you can.

THEN ASK YOUR DATA

ASK	“Who can make the range Tuesday?”
BRIEF	“Build my training meeting slides.”
FORECAST	“Who still needs their AFT and Weapons Qual before JPMRC?”

SECURITY · ACCESS

BUILT FOR CUI. SCOPED BY DESIGN.

- **Scoped access, enforced by the server.** Organization-wide or by Group, set per feature: none, view, operate or configure.
- **Viewer, Operator and Editor presets**, with per-feature overrides. Archive and delete requests need approval.
- **Separate Organizations.** One account can switch between units, and their data never mixes.
- **Encrypted** in transit (TLS 1.2+) and at rest (AES-256). Files open through 5-minute private links.
- **MFA, 24-hour sessions**, and a verified session for sensitive owner actions. Audit log kept for a year.
- **Aligned with NIST SP 800-171** and hosted on SOC 2 Type II providers. Not FedRAMP-authorized.

LESS TIME ON ADMIN.
MORE TIME WITH SOLDIERS.

THAT'S

READINESS.
